Professional Summary

Full Stack Engineer and Founder with 6+ years of experience building scalable, production-grade systems across fintech, healthtech, edtech, and algorithmic trading. Expert in backend engineering, AI/LLM integration, cloud infrastructure, and system security — delivering high-performance, compliant platforms from microservices and real-time systems to fine-tuned LLMs and automated trading engines. Chemical Engineering background provides unique analytical approach to complex software challenges and data-driven solutions.

Education

Federal University of Technology Owerri (FUTO)

B.Eng. in Chemical Engineering

Owerri, Imo State, Nigeria

Nov. 2018 – Jun. 2023

Technical Skills

Stack: Go, Rust, Python, TypeScript, PHP (Laravel), MQL5, Node.js, FastAPI, Django, REST APIs, WebSockets, Kubernetes, Helm, Docker, Envoy, CI/CD, Azure, AWS, Oracle Cloud, PostgreSQL, Redis

AI/ML & Security: LLaMA 3, QLoRA, PEFT, PyTorch, LangChain, RAG, OpenAI, Gemini, Claude, Whisper, AES-256, JWT, RBAC, GDPR, MiFID II, PCI-DSS

Professional Experience

JTNC GROUP

Backend Engineer, Full-time (Remote)

U.S.A

Feb. 2019 – Mar. 2022

- Rebuilt and maintained core trading infrastructure in Python, migrating from a monolithic architecture to a scalable microservice-based system deployed on Oracle Cloud, supporting platform operations across \$1B+ AUM; engineered and maintained the QuantumFlow algorithmic trading engine optimising low-latency order routing, signal processing, and real-time broker integration across multiple asset classes
- Designed a client-facing portal and control center for managing algorithmic trading signals, investor accounts, and broker order routing — supporting multi-client portfolio management at scale
- Implemented end-to-end security and compliance infrastructure including AES encryption, TLS/SSL, JWT, and RBAC with KYC/AML checks and SEC-aligned audit trails; built real-time trade monitoring dashboards, alerting pipelines, and immutable audit logging ensuring full operational visibility and regulatory traceability
- Established a mirrored staging environment with CI/CD automation for zero-downtime deployments and regression testing across all platform services. Stack: Python, Oracle Cloud, PostgreSQL, REST APIs, microservices, CI/CD, AES encryption, JWT, RBAC

Autonoms AI

Fullstack Engineer, Full-time (Remote)

U.S.A

May 2022 – Jan. 2024

- Contributed to the architecture and development of an AI workforce platform (React, Next.js, TypeScript) coordinating specialist outbound agents — research, enrichment, outreach, qualification, scheduling, and CRM hygiene — deployed across 147 enterprise clients
- Engineered and maintained the agent deployment pipeline (Node.js, PostgreSQL) powering the custom multi-agent orchestration layer, integrating with email, LinkedIn, calendar/booking, and CRM APIs to support automated omni-channel outbound workflows
- Built the marketplace storefront and seller/buyer portal with SSR via Next.js for SEO and sub-200ms page performance, supporting discovery and deployment of 120+ live AI agents with human-in-the-loop oversight; delivered on AWS with CI/CD automation, private cloud deployment, and isolated per-client infrastructure ensuring data sovereignty and 24/7 agent execution

CosmicForge Healthnet Limited

Nigeria

Full Stack Developer, Full-time (Hybrid)

Mar. 2024 – Feb. 2025

- Led a team of 4 engineers to Architect and deliver a full-stack telemedicine and patient management platform (React, Next.js, FastAPI, PostgreSQL) supporting health records, appointment scheduling, lab orders, prescriptions, pharmacy, AI-assisted diagnosis, real-time chat, and integrated wallet/billing — onboarding 171+ patients and 37 verified doctors across multiple specialties
- Fine-tuned LLaMA 3 (70B) on PubMed and MIMIC-III clinical datasets using QLoRA and PEFT, deployed on RunPod with 4-bit quantization for memory-efficient inference achieving sub-200ms inference latency; integrated VAPI and Whisper for AI voice-based patient communication, reducing average consultation response time by 40%
- Engineered secure RESTful APIs and WebSocket-based real-time services with JWT, RBAC, AES-256, and HIPAA-compliant PHI handling; integrated Paystack with webhook signature verification, idempotency controls, ACID-compliant transactions, and automated reconciliation; deployed on Azure with Docker, CI/CD, auto-scaling, 99% uptime, and sub-130ms API response times

Raspaas

Sri Lanka

Software Developer, Contract (Remote)

Feb. 2025 – Dec. 2025

- Built and deployed 2 enterprise-grade systems: engineered InvoTex OCR (Document AI, Google Cloud Vision, LlamaLayoutMv5, Django, FastAPI, React.js, PostgreSQL) achieving 97% extraction accuracy processing 1,000+ invoices up to 1GB in under 5 minutes; and a multi-tenant HR system with ZKTeco face recognition devices delivering sub-1s real-time attendance logging
- Architected RASPAAS HR system with Django, Celery, Docker, and PostgreSQL integrating REALAND biometric devices for automated multi-tenant attendance tracking; implemented JWT authentication, RBAC, multi-level approval workflows, and automated payroll with compliance tracking

ESQ1 Tech

Nigeria

Software Engineer, Contract

Feb. 2026 – Aug. 2026

- Designed and rebuilt [Instapay](#) (PHP Laravel, PostgreSQL, TypeScript), a fintech platform supporting utility bill payments, airtime/data top-ups, and peer-to-peer transfers; integrated Flutterwave with webhook signature verification, idempotency controls, ACID-compliant transactions, automated reconciliation, B2B identity verification, KYC/AML compliance, and real-time fraud detection
- Architected a Marketplace Escrow system within Instapay with automated fund holding, conditional release workflows, dispute resolution logic, double-entry bookkeeping, and AES-256 encryption — ensuring trustless, auditable transactions at scale
- Built and deployed [Inflexa Technologies](#) (Node.js, TypeScript, PostgreSQL, Docker), a multi-vendor e-commerce platform for physical and digital flashcard packs; integrated Stripe and Paystack with PCI-DSS-compliant checkout, idempotent payment flows, and webhook event handling; connected EasyPost, ShipEngine, Shippo, and EasyShip for real-time shipping rate calculation, label generation, and automated order fulfillment; enforced RBAC, JWT, rate limiting, and input sanitization across both platforms

Exoper

Nigeria

Founder & Lead Engineer, Full-time

Sep. 2025 – Present

- Founded and led a team of 3 engineers in end-to-end architecture and development of Exoper, a non-custodial AI-powered trading technology platform supporting forex, metals, crypto, and stocks — serving 160+ active traders with 300K+ trades executed, 60%+ signal accuracy, and 97% platform uptime
- Engineered a multi-LLM analysis engine (OpenAI, Gemini, Claude) with RAG pipelines and TradingEconomics API integration, performing full top-down technical analysis across 13 timeframes and macroeconomic analysis across all macro indicators — completing end-to-end analysis and order routing to broker in 50–70 seconds with millisecond execution latency
- Architected a MetaTrader terminal provisioning system on Linux VPS using Wine, Xvfb, and Kubectl for headless broker connectivity across all brokers and prop firms; built MQL5 Expert Advisors for automated trade execution, management, and closure with real-time WebSocket streaming and monitoring
- Implemented microservices architecture (Go, Rust, FastAPI, TypeScript) with Kubernetes multi-region deployment, Helm, Envoy proxy, and edge ingress; integrated MetaAPI, Paddle, and NowPayments; enforced AES-256 encryption, JWT, RBAC, immutable audit logging, real-time threat detection, and compliance with GDPR, MiFID II, EU AI Act, and ISO 27001
